Perfect Cleaning Performance

Variable services for one reason:
your support.

Manual dishwashing detergents and cleaners.

Premium efficiency without compromise - Is that your claim? Then you have come to the right place: We test your product so you can shine with clean results for your customers. Our test programs are flexible and get adapted to your individual requirements.

Manual dishwashing detergents

For consumers especially dried carbohydrate and oil based soils can be difficult to remove from dishes. Often a pre-treatment procedure is necessary before cleaning. By this, enzymes can facilitate the reaction.

Our services for you

- Removal of food residues
- Performance against dried soils
- Performance with/without pretreatment
- Evaluation of enzyme effects

Cleaners for floors and surfaces

The performance of cleaners can be tested with a range of consumer relevant soils in combination with different kinds of cleaning cloths.

Our services for you

- Removal of typical soils
- Performance against dried soils
- Performance in interaction with different cleaning cloths
- Performance in prevention of microbes' growth and transfer
- Odour reduction

Test methods

- Cleaning performance of cleaners and manual dishwashing detergents can be evaluated in a standardized way with a sheen tester. The result will be professionally analysed by a visual assessment.
- Manual dishwashing detergents can also be rated via the IKW plate test, even with regard to the certification "EU Ecolabel".
