

Recognised Certification Labels for the Green Button

(08/2024)

As part of the meta-label approach, the Green Button sets requirements for production processes at selected supply chain levels. Companies demonstrate compliance through recognised certification labels. Alongside the requirements for corporate due diligence processes, they are the basis for a product to be labeled with the Green Button. It is possible that further labels or recognition scopes will be added over time. In the table below the green box **GB 2.0** indicates in which supply chain levels the labels are recognised. The requirements for the “raw material extraction (fibre and material use)” level are only binding after 31.07.2026.

Production steps that must be covered by the Green Button 2.0 meta-label approach:

The recognised certification labels listed under “Fibres/Materials” are not recognised in general, but only for certain approved fibres and materials. More detailed information on which fibres and materials are allowed and which recognised certification labels can be applied to which fibres can be found in this [document](#). This overview of certification labels that are recognised by the Green Button must be read in conjunction with the linked document.

This document can be updated. The latest version can be found on our [website](#).

	Manufacturing	Wet Processes	Fibres /Materials <small>Please consult this document for approved fibres and materials.</small>
Bluesign Product		GB 2.0	GB 2.0 For Down and where permitted virgin polyester
Cotton Made in Africa (CmiA) (HIP und Mass Balance)			GB 2.0 For cotton
Cradle to Cradle Certified® (Silver Status or above)		GB 2.0	
Fairtrade Cotton			GB 2.0 For cotton
Fairtrade Textile Production	GB 2.0	GB 2.0
